Palasia, Indore – 452001, India

Professional Summary

Full Stack Developer with **3.2+ years** of experience building and shipping production-grade web applications. Proven track record across **MERN/MEAN stack** (React.js, Angular, Next.js, Node.js, Express.js, MongoDB, PostgreSQL), **microservices architecture**, and real-time systems using **WebSockets** and **Socket.io**. Experienced in developing and integrating **AI/LLM-powered features** using **OpenAI APIs**, **RAG pipelines**, **vector databases**, and **semantic search**. Skilled in **AWS (EC2, S3, ECS, CloudWatch, IAM)**, **Docker**, **CI/CD pipelines (GitHub Actions)**, **Redis caching**, and **RabbitMQ** message queuing. Strong background in payment gateway integrations (Stripe, PayPal), JWT/OAuth authentication, and scalable distributed systems.

Technical Skills

- **Languages:** JavaScript (ES6+), TypeScript, HTML5, CSS3
- **Frontend:** React.js, Next.js, Angular, Redux Toolkit, Tailwind CSS, Material UI, Bootstrap
- **Backend:** Node.js, Express.js, RESTful APIs, WebSockets (Socket.io), JWT, OAuth 2.0, RabbitMQ, Redis, Firebase
- **Databases:** MongoDB, PostgreSQL, MySQL
- **AI / ML:** OpenAI API, Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Vector Databases, Semantic Search, Prompt Engineering, AI Chatbot Integration
- **Cloud & DevOps:** AWS (EC2, S3, ECS, Fargate, CloudWatch, IAM, ALB), Docker, NGINX, CI/CD (GitHub Actions), Linux
- **Tools:** Git, GitHub, Bitbucket, Jira, Postman, VS Code, Cursor, Copilot

Professional Experience

Cyber Infrastructure (P) Ltd | Indore, India
Software Engineer

May 2023 – Present

- Designed and delivered full-stack features across **React.js, Angular, Node.js, Express.js, MongoDB, and PostgreSQL** for multiple production applications serving thousands of concurrent users.
- Reduced average API response time by **35%** by refactoring database queries, introducing indexing strategies, and implementing **Redis caching** for high-frequency read operations; system sustained performance under 3× traffic spikes during load testing.
- Built and maintained **RESTful APIs** secured with **JWT and OAuth 2.0**, and integrated real-time features using **WebSockets (Socket.io)**, enabling live notifications and chat across multiple applications.
- Integrated payment gateways including **Stripe, PayPal, Sila, and Plaid**, covering end-to-end flows from checkout to webhook-based reconciliation and refund handling.
- Architected an **AI-powered chatbot** using **OpenAI APIs** and **LLM-based workflows**, handling automated query resolution and cutting average support response time by **40%**.
- Improved background job throughput by **50%** by introducing **RabbitMQ-based asynchronous processing**, decoupling CPU-intensive tasks from the main request lifecycle.
- Containerized applications using **Docker** and managed **AWS infrastructure (EC2, S3, CloudWatch, IAM, ECS)**, configuring **NGINX** as reverse proxy and load balancer for zero-downtime deployments.
- Built and maintained **CI/CD pipelines using GitHub Actions**, cutting manual deployment effort by **60%** and reducing release cycle time from days to under two hours.

Technovation Unicorns | Bangalore, India
Software Engineer Intern

Jan 2023 – April 2023

- Built a full-stack **Employee Management System** on the MERN stack (MongoDB, Express.js, React.js, Node.js), covering end-to-end functionality from UI to backend APIs.
- Developed modular **RESTful APIs** with Express.js and reusable React component library, reducing feature development time and improving code maintainability.

Projects

- **Micro Finance Banking System:** Scalable microservices platform for a South African banking client, supporting personal and business banking operations including loans, KYC, and transaction management.
 - Implemented a **multi-role RBAC system** (Admin, Operations Manager, Shariah Auditor, Cashier, Loan Manager) with role-specific dashboards and approval workflows, reducing unauthorized access incidents to zero.

- Built a **multi-level KYC verification pipeline** with document validation, compliance monitoring, and approval routing, cutting manual onboarding effort by **60%**.
- Developed core banking modules for **deposits, withdrawals, inter-bank transfers, loan processing, and fee management**, integrated with **SOAP-based Central Bank APIs**.
- Architected distributed **microservices** (API Gateway, User, Wallet, Transaction, Loan services) using **RabbitMQ** for event-driven async communication and **Redis** for caching hot data; maintained sub-200ms P95 latency across core endpoints.
- Built an **AI-powered banking assistant** using **OpenAI APIs, RAG, vector databases, and semantic search**, enabling context-aware financial Q&A and automating **35%** of routine customer queries.
- Implemented **centralized audit logging and activity tracing** for full compliance observability.
- **AI Session Management System:** AI-powered platform for online session management, attendance tracking, certification issuance, and intelligent user assistance.
 - Designed **RBAC-based access control** for students, instructors, moderators, and administrators, with scoped permissions per role.
 - Built real-time collaboration modules using **Socket.io / WebSockets** for live session updates, interactive chat, and event-driven notifications.
 - Integrated **OpenAI APIs and generative AI workflows** for automated support and intelligent session guidance, reducing instructor-side support tickets by **45%**.
 - Implemented **RAG-based architecture** with **vector databases, embedding models, and semantic search** for context-aware, grounded AI responses with minimal hallucination.
 - Integrated **Stripe** subscription and payment flows for premium course enrollments and feature gating.
 - Deployed and managed the full infrastructure on **AWS (EC2, S3, CloudWatch)**, containerized with **Docker** and served through **NGINX**, with **CI/CD via GitHub Actions**.
- **Real-Time Social Media Platform:** Scalable social networking platform with interactive real-time communication and high-performance content delivery.
 - Built real-time messaging, live notifications, and activity feeds using **Socket.io and WebSockets**, supporting concurrent sessions across thousands of users.
 - Implemented social features including posts, likes, comments, follower graphs, and activity feeds, with optimized MongoDB aggregation pipelines and compound indexing for sub-50ms query times.
 - Secured all API routes with **JWT-based authentication** and role-based route guards.
 - Deployed containerized microservices on **AWS ECS with Fargate**, behind an **Application Load Balancer (ALB)**, with **CloudWatch** dashboards for real-time observability.

Education

Medi-Caps University – Indore, India
Bachelor of Technology, Computer Science and Engineering

2019 – 2023
